

6th International Symposium for Farming Systems Design

Guillaume Martin

Guillaume Martin studied agricultural science at Wageningen University before earning a PhD in agronomy at Toulouse University, France. Since then, he has worked as a researcher at INRA Toulouse (France). Main expertise and interest are in the articulation of comprehensive analysis, simulation modelling and co-design of pastoral and crop-livestock systems to support their transition to agro-ecology. To this end, he develops decision-support tools (e.g. Forage Rummy) used by French farm consultants and farmers.
